PROJOB® **WORKWEAR COLLECTION**

Optimized and individualized garments reflecting functionality and personality for every working man and woman.

PROJOB® **PROGRESSION**

A collection of visually uniform garments that comply to every main European standard and certificate, contemporary and upcoming. Unisex with selected garments in women's cut.

PROJOB® **PRIO SERIES**

Our cost effective generic collection, made to meet high requirements in large volumes with focus on the essential. All in unisex sizes.

PROJOB® **ORYX WORKSHOES**

Our new generic line of workshoes that meets the requirements of 80% of work situations. Sizes for men and women.

SEE YOU SOONER THAN LATER: EN ISO 20471.

GUIDE EN ISO 20471

Reflective clothing is personal protective equipment.

Personal protective equipment are products that are designed to be used by a person for protection against health and safety risks.

The special demands placed on personal protective equipment in Europe are described in EN-norms.

Products that pass these basic safety requirements are allowed to carry the obligatory CE-mark. In order for a safety product to be approved and marked with the CE mark, it must have been tested and certified by an authorized organisation.

HIGH-VIS CLOTHES FOR PRO USERS

These have to be CE-marked and approved according to the norm EN ISO 20471 (earlier EN 471). The norm describes among other things what colours are permitted, where on the clothes the reflecting material is to be placed, and which information that must accompany the clothes. The design of the clothes must also follow certain criteria in order to achieve the best possible visibility. In the norm there are three classes. The norm specifies how much fluorescing cloth and how big the reflective area reflective clothes of each class must have.

Minimum area with high visible material, m²

	Class 1	Class 2	Class 3
Background material	0,14	0,50	0,80
Reflective material	0,10	0,13	0,20

CLASS 1

This gives the lowest level of protection. The total fluorescent area must be at least 0.14m² and the reflective area 0.10m².

May only be used if there is little contact with a few vehicles and/or slow moving traffic.

CLASS 2

Gives a much better protection than class 1, especially in daytime, twilight and fog. The total fluorescent area must be at least 0.50m² and the reflective area 0.13m². Class 2 is used in harbours, on railways, building sites, parking places, cross country searches, load bearing vehicles and other places where class 3 is not required.

CLASS 3

This gives the highest level of protection. The total fluorescent area must be at least 0.80m² and the reflective area 0.20m². To be used in the proximity of fast moving traffic.

CLASSIFICATION
BASED ON MINIMUM
OF VISIBLE MATERIAL
SURFACE PER M²

CLASS 3:

0,80 M² HV SURFACE
0,20 M² REFLECTIVE SURFACE

CLASS 2:

0,50 M² HV SURFACE
0,13 M² REFLECTIVE SURFACE

CLASS 1:

0,14 M² HV SURFACE
0,10 M² REFLECTIVE SURFACE

Cordura® is an extremely durable polyamide material. It is three times stronger than regular polyamide and is used as reinforcement on exposed areas.

DuPont™ KEVLAR® material combines strength with low weight. KEVLAR® is woven from aramid and nylon fibers. This extremely abrasion-resistant and durable material is ideal for workwear and is primarily used on areas exposed to heavy wear.

The Japanese company YKK® is the market leader in zippers. Their products are of high quality and set the standard for other players in the industry.

Primaloft® is the leading brand in synthetic insulation. The fibers mimic the properties of down but do not absorb moisture. The material is made up of ultrafine microfibers that create millions of tiny air pockets, providing highly effective insulation.

3M Scotchlite™ personal reflective material exceeds the highest reflectivity category in the European standard for high-visibility protective clothing, EN471/EN ISO 20471.

Ventair® is a high-performance three-component high-tech material with impressive MVP (moisture vapor permeability) and WP (waterproofness) of at least 8000 (8000/8000).

Coats® Epic has set a new standard in the thread market. A core of polyester fiber is wrapped with an additional polyester fiber, providing extremely high abrasion resistance and tensile strength.

The CORDURA logo is displayed in white text on a black background.The logo features the word "DUPONT" in a small, white, sans-serif font above the word "Kevlar" in a larger, white, sans-serif font, all on a black background.The YKK logo is shown in white text on a black background.The PRIMALOFT logo consists of the word "PRIMALOFT" in white, sans-serif capital letters above a red shield-shaped icon containing a white stylized 'P'.The 3M logo is displayed in red text on a black background.The VENTAIR logo features the word "VENTAIR" in white, sans-serif capital letters followed by a stylized white 'X' symbol.The COATS logo shows a white circular icon with a stylized chain-link pattern inside, with the word "COATS" in white, sans-serif capital letters below it.

WE USE PREMIUM COMPONENTS IN OUR PREMIUM PRODUCTS.

A good way to secure quality and functionality is to use original components in our own premium products. This enables us to focus on garment construction and design while we can rely on the added details.

When there is a need deviate from from this approach it is simply because we can deliver comparable quality to a better price (hence the PRIO series) or because the original suppliers can only deliver standard components in cases where an individual product requires a component beyond that standard. Regardless, we always focus on quality and functionality.

When it comes to functionality we have good use of the company group that we are part of. New Wave Group has several subsidiaries, like international sports brands Craft and Seger where we can use group internal capacity, knowledge and purchasing connections to lift our own products.

PROJOB FUNCTIONALITY INDICATORS

**PRO[®]
TEC**

Pro Tec™ are the materials that afford effective protection against exterior effects. They are very resistant to wear and to tearing. Pro Tec™ is suited to extremely strenuous work in rough environments.

**PRO[®]
DRY**

ProDry™ are the materials you wear closest to your skin. They transport moisture and allow it to pass to the outer layer. With ProDry™ there you don't have to have damp and cold garments next to your body.

**PRO[®]
VENT**

Pro Vent™ are the materials with high breathability. They let out moisture and superfluous heat. They withstand rain, snow and wind. Pro Vent™ are resilient, protective materials worn on the very outside.

**PRO[®]
THERMAL**

Pro Thermal™ are the materials that afford effective insulation against both heat and cold. The materials detect and dispose of surplus heat at the same time that they keep out unneeded cold. Pro Thermal™ keeps body temperature at an even and pleasant level all day.

**”THERE IS NO
BAD WEATHER,
THERE IS ONLY
POOR WEATHER
PROTECTION.”**

GUIDE **EN 343**

Clothing that carries an EN 343 certification is tested for protection against bad weather.

The latest version of EN 343:2019 involves testing seams for water penetration in classes 1-4 and resistance to water vapor classes 1-4, with 4 being the highest class. The garments must achieve results on both tests to be labeled with the EN 343 symbol.

Protection against ingress of water: 1-4, where class 4 provides the best water tightness
Water vapor resistance (breathability): 1-4, where class 4 gives the best breathability
Effect of high pressure water drops from above (this is optional).

The results are affected by the construction of the garment, where an unlined garment can achieve EN 343 4/4 while a lined garment with the same outer fabric (but with a lining that affects the penetration of moisture) only achieves EN 343 4/1.

The previous standard only had 3 classes, these have now been expanded with a fourth class that requires a higher result. Garments certified according to EN 343 continue to apply. PROJOB Workwear will continuously update certified garments.

WATER RESISTANCE (WP)

Class 1 ≥ 8000 Pa

Class 2 ≥ 8000 Pa material after pretreatment

Class 3 $\geq 13,000$ Pa material after pretreatment

Class 4 $\geq 20,000$ Pa material after pretreatment

WATER VAPOR RESISTANCE (RET)

The breathing function is indicated in RET value. At a lower RET value, the better respiratory function.

Class 1	Ret > 40
Class 2	25 < Ret ≤ 40
Class 3	15 < Ret ≤ 25
Class 4	Ret ≤ 15

HIGHLIGHTED GARMENT

The workpants are in many ways the most crucial work garment since it is worn throughout the entire workday. Its ability to hold tools and kneepads and store essentials like nails and screws is as important as its adaptability to movement. Pants also take a lot of wearing and tearing. We present a range of 17 pairs of good workpants for various use and preferences. From the classic denim to the tight fit technical stretch like 5551.

Please note that there are also great Construction pants in the separate PROGRESSION, PRIO and HIGH VISIBILITY chapters.

TRANSPORT, SERVICE & INSTALLATION

Pants.
Shorts.
Pirate pants.

HIGHLIGHTED GARMENT

We distinguish **SERVICE** pants from **CONSTRUCTION** pants in our range structure. Many of the core qualities are similar, and some styles virtually cross-over, but the Service pant typically lack holster pockets and if they have, they are removable. The same goes for kneepads. We also generally avoid, or adapt, the back pockets so that they don't get stuck in vehicle seats or create discomfort when seated. Reinforced knees and seats are common.

There are currently 24 styles to choose from plus the styles shown in the separate **PROGRESSION**, **PRIO** and **HIGH VISIBILITY** chapters.

HIGHLIGHTED GARMENTS

In the Painter chapter we have simply highlighted the white garments from our entire workwear collection and gathered them in one chapter for your convenience.

As you can see on the following pages, these products are available in other colours too and can be found in other chapters of this catalogue. The pant 5551, also highlighted on the CONSTRUCTION chapter intro, is here combined with a nice 2129 layer 2 jacket. The set has been in high demand in the last seasons due to its functionality and good looks, a perfect set for outdoor and indoor paint jobs.

HIGHLIGHTED GARMENT

The Upper parts chapter include all the jackets, sweaters and shirts that we classify as very generic and individual, thus not attributed to any specific range (like **PROGRESSION** or **PRIO SERIES**) or characteristic (like High Visibility or shell garments). Many of the garments here can be classified as highly functional Layer 1 and Layer 2 garments. You will find very modern cut microfleece jackets alongside very classic checkered flannel shirts. All in all, there are 38 gold nuggets in this section that you should get acquainted with, regardless of what branch of work you are in.

FUNCTIONAL JACKET 3406

HIGHLIGHTED GARMENTS

The High Visibility range is the flagship of every workwear collection and the use of certified

EN ISO 20471 garments is spreading beyond the originally intended areas. There is a classification of High Visibility garments shown on pages 60-81.

This chapter include the upper and lower parts in class 1 to class 3 that are not PROGRESSION or PRIO SERIES. We have put extreme effort into the functionality and quality of these products and we consider them among the best items on the market.

UPPER PART

FUNCTIONAL JACKET 3-IN-1 6445

- WIND- AND WATERPROOF
- 100% POLYESTER 360G/M²
- QUILTED INNER JACKET CLASS 3/2
- TAPED SEAMS

HIGHLIGHTED GARMENTS

Weather protection capacity has its own classification, EN 343. This is described on pages 86-95. Since this is an important feature to most outdoor workers, we have simplified the search structure by creating a separate section for all our EN 343 garments outside PROGRESSION and PRIO SERIES.

We also added our functional underwear in this section to underline the common purpose of keeping the wearer dry, both from the inside and from the outside, be it from body moisture or heavy rain.

UPPER PART

SHELL JACKET EN ISO 20471 CLASS 3 **6455**

ENHANCED VISIBILITY EN 17353

We launched PROGRESSION in 2024 as a very ambitious collection comprising as many added values as possible and being complete within a distinctive design that makes it easily identifiable. Part of this design is the reflective tape present on all garments, rendering the collection EN 17353 Enhanced Visibility certification.

Our target group is the buyer with very high focus on certification and sustainability. PROGRESSION is a concept primarily developed for the European market and complying with the highly set current and upcoming European standards.

- TESTED FOR INDUSTRIAL WASHING ACCORDING TO ISO 15797 ●
- INCREASED VISIBILITY EN 17353 ●
- SUPPLIED IN A BIO-BASED, COMPOSTABLE BAG ●

1. EN 17353

Certification for enhanced visibility equipment for medium risk situations. This standard specifies requirements for enhanced visibility equipment in the form of garments, which can signal the user's presence. The enhanced visibility equipment is intended to provide more conspicuous visibility of the wearer in medium risk situations under any daylight conditions and/or under illumination by vehicles headlights or searchlights in the dark.

2. RECYCLED POLYESTER

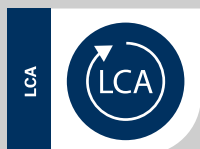

All polyester fabric we use in PROGRESSION collection is recycled from PET bottles. Recycled polyester significantly reduces the carbon footprint and energy consumption compared to virgin polyester. It also diverts plastic waste from landfills and oceans. rPET maintains the same properties as virgin polyester, such as durability, flexibility, and resistance to wrinkles and shrinkage.

3. ORGANIC COTTON

All cotton fabric we use in PROGRESSION collection is organic. Organic cotton is grown without the use of synthetic pesticides, herbicides, or genetically modified organisms (GMOs). The farming practices used to produce organic cotton aim to promote soil health, reduce environmental impact, and support biodiversity.

Organic cotton farming typically uses less water and energy compared to conventional cotton farming. It also avoids harmful chemicals, reducing pollution in soil and water and benefiting local ecosystems.

4. LIFECYCLE ANALYSIS

Life-cycle assessment (LCA) is a process of evaluating the effects that a product has on the environment over the entire period of its life thereby increasing resource-use efficiency and decreasing liabilities. It can be used to study the environmental impact of either a product or the function the product is designed to perform.

LCA is commonly referred to as a "cradle-to-grave" analysis. LCA's key elements are: (1) identify and quantify the environmental loads involved; e.g. the energy and raw materials consumed, the emissions and wastes generated; (2) evaluate the potential environmental impacts of these loads; and (3) assess the options available for reducing these environmental impacts.

5. ISO 15797

Specifies test procedures and equipment which can be used in the evaluation of workwear intended to be industrially laundered. They serve as a basis for testing relevant properties such as dimensional stability, color characteristics, creasing, seam puckering, pilling and visual aspects in general.

6. DECOMPOSTABLE PACKING

All garments in the PROGRESSION series are delivered in packing made of PLA material, a biodegradable polymer produced from renewable plant resources. By choosing PLA materials, we reduce the amount of plastic waste and the problems associated with the long degradation time of traditional plastics normally used in polybags.

7. EN 14404

EN 14404 is the European standard which specifies the properties of the knee pads used when working in a kneeling position. The standard is designed to ensure that the knee pads give sufficient protection and comfort for the wearer. Knee pads that comply to EN 14404 is subjected to a number of tests to assess the impact resistance, ergonomic design and level of comfort.

To be certified for EN 14404, the knee pads have to be combined with a pair of trousers that jointly applies to the same certification. PROJOBs knee pads are certified to EN 14404, type 2, class 1.

8. EN 343

Products certified according to EN 343 includes technical and functional fabric for protective clothing.

EN 343 is the European Standard for garments that protects the bearer against wet weather. This standard involves testing of seams for water penetration in classes 1-4 and resistance to water vapor in classes 1-4, with 4 being the highest class. The garments must achieve results on both tests to be labeled with the EN 343 symbol.

9. EN 342

EN 342 is a European standard that specifies the requirements and test methods for protective clothing designed to provide protection against cold environments. This standard is particularly relevant for clothing intended for work in cold conditions where the air temperature can go below -5°C. Clothing is tested under various conditions to determine its thermal insulation, which can be categorized into two types:

- Represents the thermal insulation of the entire clothing ensemble.

- Represents the thermal insulation of the ensemble without taking into account the effects of air and movement.

This standard is vital for workers in industries such as construction, agriculture, and logistics, where protection against cold is critical for safety and productivity.

12

MAJOR PROGRESSION BENEFITS

10. RECYCLED THREAD

Coats EcoVerde is the first globally available 100% recycled line of premium corespun and textured sewing threads, delivering the same proven level of performance as the industry's leading non-recycled threads.

EcoVerde threads help complete the loop for garments and accessories that already use recycled polyester fabrics or other eco-friendly fabrics or materials.

Waste plastic is collected from various industrial and post-consumer sources. Used plastic (PET) bottles are a significant proportion and an example of how this works. These are collected, sorted, cleaned, ground to flakes and then melted down and extruded into the fibre and filaments from which EcoVerde sewing threads are made.

11. YKK RECYCLED ZIPPER

We use zippers from YKK NATULON®. The NATULON® product line is designated for customers who want to increase the amount of recycled material in their products.

The NATULON® Mechanically Recycled zipper is made from materials recycled from plastic bottles and other materials using mechanical recycling technology. The yarn used in the tape is made from over 99% post-consumer recycled materials.

12. OEKO-TEX STANDARD 100

Oeko-tex standard 100 is one of the world's best-known label for textiles tested for harmful substances. The standard stands for customer confidence and high product safety.

PRIO SERIES CONSTRUCTION & SERVICE

Pants.
Shorts.
Coveralls.
Jackets.
Vests.
Sweaters.
T-shirts.
Piques.

HIGHLIGHTED GARMENTS

In the beginning, the majority of products we developed were “mavericks”, designed to be a unique and individual solution to a specific need or job. Often there was a matching upper part/lower part, but not a wide family of garments. As time went on and we explored new markets, we saw different buying patterns and different needs. Many customers required product families with common features and distinct price levels. The PRIO SERIES was our first “mega launch” where an entire range reached the market simultaneously.

With the ambition to meet specific target prices with good quality, PRIO SERIES was an instant success and it is still a backbone in our complete offer.

Jackets.
Sweaters.
T-shirts.
Piques.
Pants.
Shorts.

HIGHLIGHTED GARMENTS

PRIO SERIES would not be complete without a range of High Visibility garments and they are quite abundant, therefore we put them in a separate subchapter. These items are, compared with the ISO EN 20471 garments on page 58, by design somewhat more plain and generic but still hold a quality and functionality well above the market standard. Very good value for money.

WOMEN'S WORKWEAR FEMALE SIZES & CUT

High Visibility ISO EN 20471

Jackets, Sweaters, T-shirts, Pants.

Construction, Service & Installation

Jackets, Sweaters, T-shirts, Pants, Shorts, Pirate pants, Base layer, Underwear.

PROGRESSION

Jackets, Sweaters, T-shirts, Pants, Shorts.

HIGHLIGHTED GARMENTS

Female workers often have to make do with clothes dimensioned for men, based on how the work market looked 30-50 years ago. That has changed. A lot.

Although many garments are, in essence, unisex as long as size range cover smaller sizes. But female workers still deserve a choice with more fitted clothes and we take pride in providing that choice.

In this chapter we collect all products with Ladies' Fit, also including the PROGRESSION collection. All in all, with Upper parts, Lower parts and Underwear, this range spans over almost 40 articles, a range which we intend to develop further.

ORYX WORKSHOES

Sandals S1.
Workshoes S3, S7.
Insoles.

HIGHLIGHTED PRODUCT

The ORYX WORKSHOES SERIES is also something virtually new, launched in 2025. We decided that a generic series of workshoes would make our total offer complete and it would make us able to deliver an entire wardrobe from our warehouse, something that the numerous users of Projob based webshops specifically asked for. We are happy to say that so far, the ORYX shoes have been very well recieved by the market and triggered by that we plan to extend our small but well dimensioned range in the years to come.

ORYX SANDAL S1PS

A lightweight and flexible safety shoe with a durable nubuck upper. The shoe features additional TPU reinforcements at the toe and heel for increased durability. The ERP midsole provides an optimal fit and high comfort, while the durable rubber outsole ensures a good grip on various surfaces. The composite toe cap and textile penetration-resistant midsole protect your feet from impact and penetration. The FitGo lacing system makes donning easy and the fit optimal, located on the outside of the shoe. The removable insole in open cell PU-foam gives the shoe excellent breathability.

Size: 35-48
Quality: Midsole: EVA EPR Outsole: Rubber Upper material: PU nubuck, mesh, TPU reinforcements heel+toe
Colors: black/grey-9998, black/yellow-9910

PROJOB & CSR POLICIES

We have the possibility to contribute and make a difference through our global operations. PROJOB is a part of New Wave Group. New Wave Group is working with social and environmental sustainability under the term CSR (Corporate Social Responsibility). As our customer, you are supporting this work.

New Wave Group has two main strategies to decrease our environmental impact and to cut our emission of greenhouse gases. First of all, we must influence the transportation companies that we are working with.

Our membership in "Clean Shipping Index" aims to impact the shipping companies to use cleaner vessels by ranking the most high-performing ships. The Group works with some of the largest transportation companies on the market, all of which have environmental programs in place for their operations.

Secondly, we always strive to improve our internal logistics and work methods. Within our group of companies, we club together as much as possible of our shipments and transportations. In addition to protecting the environment, sustainable solutions can also contribute to the streamlining of our operations.

WE LIKE SUSTAINABLE PRODUCTS

New Wave Group believes in classic design and good quality products - a concept that will never be out-of-fashion. We hope you will enjoy our products for a long time. All products can be customized to your precise demand, which is a good way to ensure long-lasting use and sustainable consumption.

It is important to New Wave Group that our products are safe and free from restricted chemicals. New Wave Group is a member of the Swedish Chemicals Group at Swerea IVF to receive the most updated information on legislation and developments. This supports our active work to reduce and replace chemicals in line with best available technique. All our suppliers must follow the requirements in our Restricted Substance List. The list has been designed in accordance with legislations such as REACH, but also taking into account industry recommendations and standards. As a result, our requirements are often stricter than the applicable legislation.

Learn more about our Code of Conduct and our sustainability work on New Wave Group's webpage: www.nwg.se/en.

NEW WAVE GROUP SUSTAINABILITY REPORT

We are part of New Wave Group, a Swedish Company Group listed on the Stockholm Stock Exchange. On our website nwg.se you will always find our latest published Sustainability Report

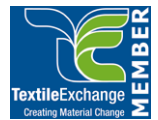

AMFORI BSCI (BUSINESS SOCIAL COMPLIANCE INITIATIVE)

Amfori BSCI is an initiative for companies committed to improve working conditions in the global supply chain. The amfori BSCI Code of Conduct have requirements on minimum wage, working hours, the prohibition of child labour and several other important criteria.

ACCORD ON FIRE AND BUILDING SAFETY IN BANGLADESH

The Accord is a binding agreement designed to improve fire- and building safety for the textile industry in Bangladesh. The Accord includes inspections, fire safety training as well as effective remediation and renovations.

TEXTILE EXCHANGE

Textile Exchange is an international organization that works toward the responsible expansion of the global textile industry, with a particular focus on organic cotton.

CLEAN SHIPPING INDEX

The Clean Shipping Index aims to impact the shipping companies to use cleaner vessels by ranking the most high-performing ships. Transport buyers can use the Clean Shipping Index to calculate and minimize their environmental footprint.

STANDARD 100 BY OEKO-TEX®

Oeko-Tex is one of the world's best-known labels for textiles tested for harmful substances. Many of our products are certified according to the Standard 100 by Oeko-Tex®, which guarantees that the every component of the product has been tested for harmful substances and thus is harmless for human health.

THE SWEDISH CHEMICALS GROUP

The Chemicals Group is arranged by RISE IVF, a world leading research group with a key role in the Swedish innovation system. In this network we receive the most updated information on chemical legislations and developments.

SUSTAINABLE BY CHOICE

IMPROVING WORKING CONDITIONS

New Wave Group is never far away from the manufacturing of our products. Being represented on site enables us to have a close partnership with our suppliers and to actively monitor their business operations. We have a CSR-team, which consists of full-time staff dedicated to visit our suppliers, monitor and support them with various social and environmental topics.

As a member of BSCI, New Wave Group has adopted the BSCI Code of Conduct. It contains requirements on minimum wage, working hours and the prohibition of child labour, among several other requirements from international conventions like to ILO Conventions and the Declaration of Human Rights. New Wave Group has a commitment towards BSCI to engage our

suppliers in third party examination by independent auditors. Having both internal and external audits is a quality assurance to us. We strive for constant improvements and continuous development.

New Wave Group is a signatory member of the pioneering Accord on Fire and Building Safety in Bangladesh. The Accord is a binding contract between brands, international and local trade unions and NGOs. Its aim is to make all garment factories in Bangladesh safe workplaces, which includes a program of safety inspections and a commitment to ensure that the necessary repairs and renovations are carried out. The Accord will have significant impact on the daily lives of millions of textile workers in Bangladesh. We are proud to be a part of this project!

FABRICS & FIBRES

COTTON

Cotton is a soft and comfortable natural material. It insulates and ventilates. One of cotton's advantages is that it does not melt when exposed to flames and sparks and that it is difficult to set fire to. Our heavy-duty cotton twill is extra sturdy and durable. This is possible because we ourselves are involved in and direct development from fibre to final production.

POLYESTER/COTTON

The combination of cotton and polyester have proven perfect for making long-lasting garments. The breathability of cotton combined with the durability and colour fastness of polyester make garments in polyester/cotton keep their shape and colour longer. Clothes in polyester/cotton are therefore an excellent choice for hard work that places great demands on both the wearer and the garments.

SPUN DYED

Using the traditional dyeing method, the finished fabric is dipped in a dye bath, before being rinsed and then dried. With the spun dyed process, the colour pigment is added before the fibre is spun and the fabric subsequently woven/knitted.

In this way the colour becomes part of the fibre. The woven/knitted fabric achieves much better colour fastness, making it better able to withstand washing, wearing, sunlight and bleaching.

In environmental terms, spun dye is much more eco-friendly than the traditional method of dyeing. As it eliminates a stage in the dyeing process, consumption of energy, chemicals and water is significantly reduced.

WASHING INSTRUCTIONS & SYMBOLS

WASHING

All our garments are properly tested. Each of them has its own washing instructions, and it's important to follow these. If a garment is always washed with similar colours and at the recommended temperature, it will stay good looking for longer.

If the label says Wash separately in the washing instructions, this means that the colour of the fabric may run – for these garments, which may initially have a little extra dye, it is particularly important to follow the washing instructions to not harm any other garments.

PREWASH

Use the same amount of detergent as in the main wash cycle when prewashing very dirty clothes, skip the prewash cycle completely for less dirty garments to save water and energy. Soaking garments is not recommended due to the damage which undissolved detergent can do to fabrics.

DETERGENT

Always be sure to use the correct amount of detergent – use the detergent packaging as reference. Choose a bleach-free detergent which is suitable for the temperature of the wash.

DRYING

Only tumble dry as a last resort – if you have enough time and space, hanging garments out to dry is recommended as this is better for your clothes. Smooth out the fabric and the seams before hanging up a garment. When tumble drying, the garment should never be completely dried, as this causes unnecessary wear and can cause shrinkage.

Shows the recommended wash temperature

Do not tumble dry

Do not iron

Delicate cycle

Tumble dry on low heat (50°C)

Professional leather clean

Do not use chlorine bleach

Cool iron –110°C max,
suitable for nylon

Do not wring

Dry-clean, but do not use
chemicals stronger than
perchloroethylene

Cool iron –150°C max,
suitable for polyester/cotton

Hand wash only

Do not dry-clean

Cool iron –200°C max
suitable for cotton

CHOOSE SIZE CAREFULLY

Size is extremely important when it comes to work clothes – it affects function, wear and ergonomics. PROJOB clothing is designed with flexibility in mind. Clothes that are the wrong size prevent the wearer from moving around freely. Pockets and other functional details which are used repeatedly during the working day need to be positioned where they can be reached easily. If the clothing is the wrong size, either the positioning of the pockets will force the wearer to make strenuous movements, or the pockets will serve no purpose at all. It's also extremely important for the knee protectors to be in the right place to prevent unnecessary wear. The size also affects how long clothes last – the tighter the garment, the greater the strain on the seams and the fabric.

The PROJOB collection includes sizes to meet every need. Almost all our tops are available in XS–4XL and almost all our trousers are available in C44–C62, D84–D120 and C146–C156.
